Create a website for a Engineering Consulting Company bSentient

Build a static (front-end only) website for Engineering Consulting Company bSentient. As a starting point, you may want to use wireframes, as we did in the UX lesson (you can use Balsamiq or any other tool, including just pen and paper). You can use either your assets or the assets provided by bSentient.

The Company is a startup that has just launch one in-house product and they are looking to get more exposure on their expertise and services that they have to offer.

You have been given the following requirements after interviews with the client's representatives:

- Their primary target audiences are their customers and potential customer who wish to use the site to see what they have to offer in their field of expertise.
- target customer by dummy newsletter/contact form

   -Also, the company would like to use the site to showcase their fields of expertise

- a link to their current product web shop / video page
- a page to show case training and where the customer can download some training material
- Contact us page with contact form name/email/different topic enquiries

The band has provided you, the developer, with the following assets that they would like to show case on their website:

- Photos of the consultant
- A video clip
- Content:

   -about the

   -Information on their development services

   -information on their consulting services

   -information on their training

- Power point presentation on training that can be downloaded for free
- Also, they are in the process of creating a social media presence and would like to add links to their Facebook, Twitter pages.
  They also want you to add the personal linked link to the consultant LinkedIn profiles
